---

# DevsSoa

## *DevsSoa Java(Axis2) Installation Guide*

---

## Server Side Software Requirements

---

- Java Development Kit (JDK): Version 1.4 or later.
- Servlet Container, ideally Tomcat 5.5 ([download](#)).
- Axis2: Versión 1.4.1.
  - Web application of Axis2 (WAR) that can be deployed in most of the servlet containers. ([download](#)).
- Disk: Approximately 11 MB separately for standard binary distribution.

---

## Server Side Contents

---

- Services:
  - *Simulator.aar*: Axis2 Archived web service of DevsSoa Simulator service.
  - *Coordinator.aar*: Axis2 Archived web service of DevsSoa Coordinator service.
- lib (library jar files):
  - *xdevs.jar*: Devs simulation API written on Java.
  - *devsjava.jar*: Devs simulation API written on Java.
  - *examples.jar*: xdevs and devsjava model implementation examples.

---

## Server Side Installation

---

- Add to the shared lib directory of the servlet container the library files (*xdevs.jar*, *devsjava.jar* and *examples.jar*). In Tomcat 5.5 “%TOMCAT\_HOME%\shared\lib”.
- Deploy the Axis2 WAR web application in the servlet container.
- Upload the provided services via administration web application of Axis2. Or in Tomcat 5.5 the services can be copied directly to the directory “%TOMCAT\_HOME%\webapps\axis2\WEB-INF\services”.

---

## Client Side Software Requirements

---

- Java Development Kit (JDK): Version 1.4 or later.
- Axis2: Versión 1.4.1.
  - Standard Binary Distribution. ([download](#)).
- Disk: Approximately 11 MB separately for standard binary distribution.
- Apache Ant 1.7.1.

---

## Client Side Contents

---

- *DevsSoaSimulatorJava.jar*: Simulator Client executable file.
  - Arguments:
    - The path of the xml file that contains the coupled model in DEVSML format.
    - The number of iterations for the simulation performance.
- *DevsSoaCoordinatorJava.jar*: Coordinator Client executable file.
  - Arguments:
    - The path of the xml file that contains the coupled model in DEVSML format.
    - The number of iterations for the simulation performance.
- *lib* : (example DEVSML coupled models).
- *build.xml*: Ant file.

---

## Client Side Installation

---

- Necessary environment variables:
  - JAVA\_HOME : jdk installation directory.
  - AXIS2\_HOME : axis2 installation directory.
  - ANT\_HOME: Ant installation directory.
    - Add “%ANT\_HOME%\bin” to the Path variable.

---

## Running Client

---

In the client directory:

- *ant -Dfile='arg' -DnumIter='arg' simulator.run*: run the simulator client test.
  - Example: *ant -Dfile=lib/GptJavaJava.xml -DnumIter=110 simulator.run*
- *ant -Dfile='arg' -DnumIter='arg' coordinator.run*: run the coordinator client test.
  - Example: *ant -Dfile=lib/GptJavaJava.xml -DnumIter=110 coordinator.run*
